Homework 7 Supplement, Statistics 200A Fall 2011

1. Let $Y \sim \text{Beta}(a, b)$, with a and b positive integers; i.e. Y has p.d.f.

$$f_Y(y) = \frac{y^{a-1}(1-y)^{b-1}}{B(a,b)}, \quad 0 < y < 1,$$

where $B(a, b)$ is the beta function. Let $(X|Y = y) \sim \text{Bi}(n, y)$.

   (a) What is the joint p.d.f of (X, Y)?

   (b) What is the marginal probability function of X?

   (c) What is the p.d.f. of $Y|X = x$?

2. Let $N \sim \text{Poi}(\lambda)$ with $\lambda > 0$; i.e. N has probability function

$$f_N(k) = e^{-\lambda} \frac{\lambda^k}{k!}, \quad k = 0, 1, \ldots$$

Let $(X|N = n) \sim \text{Bi}(n, p)$ with $0 \le p \le 1$ and let $Y = N - X$.

   (a) Show that $X \sim \text{Poi}(p\lambda)$. You may use the identity:

$$e^{-a} \sum_{n=k}^{\infty} \binom{n}{k} \frac{a^n}{n!} = \frac{a^k}{k!}, \quad a \in \mathbb{R}.$$

   (b) Show that $Y \sim \text{Poi}((1-p)\lambda)$.

   (c) Show that X and Y are independent.
